SOLID CONVERTE

SOLID CONVERTER PD

par la méthode des volumes finis

EQUATIONS DU MOUVEMENT

Composante suivant l'axe x : ($\phi=u$)

Représentation du volume de contrôle -U_e-.

$$\rho u. \frac{\partial u}{\partial x} - \mu. \frac{\partial^2 u}{\partial x^2} + \rho v. \frac{\partial u}{\partial y} - \mu. \frac{\partial^2 u}{\partial y^2} = -\frac{\partial p}{\partial x}$$
$$\frac{\partial J_x}{\partial x} + \frac{\partial J_y}{\partial y} = -\frac{\partial p}{\partial x}$$
$$\begin{cases} J_x = \rho u.u - \mu. \frac{\partial u}{\partial x} \\ J_y = \rho v.u - \mu. \frac{\partial u}{\partial y} \end{cases}$$

Intégration autour de u_e :

 $(\delta x_e.\Delta y)$

$$\implies (J_{Ex} - J_{Px}) \Delta y + (J_{ny} - J_{sy}) \delta x_e = (p_P - p_E) \Delta y$$

$$\begin{cases} J_{Ex} = (\rho u)_E . u_E - \left(\mu . \frac{\partial u}{\partial x}\right)_E \\ J_{Px} = (\rho u)_P . u_P - \left(\mu . \frac{\partial u}{\partial x}\right)_P \\ J_{ny} = (\rho v)_n . u_n - \left(\mu . \frac{\partial u}{\partial y}\right)_n \\ J_{sy} = (\rho v)_s . u_s - \left(\mu . \frac{\partial u}{\partial y}\right)_s \end{cases}$$
