## Exercise 1:

Provide the associated functions (First and Second Canonical Forms) for each Karnaugh map:
1)

| AB | 00 | 01 | 11 | 10 |
| :---: | :--- | :--- | :--- | :--- |
| 0 |  |  | 1 | 1 |
| 1 |  | 1 | 1 |  |

2) 

| CD | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| 00 |  | 1 |  | 1 |
| 01 | 1 | 1 | 1 | 1 |
| 11 | 1 | 1 | 1 | 1 |
| 10 |  | 1 |  | 1 |

## Exercise 2:

Simplify with Karnaugh Map the logical functions represented by the following tables:
1)

| AB | 00 | 01 | 11 | 10 |
| :---: | :--- | :--- | :--- | :--- |
| 0 | 1 |  |  | 1 |
| 1 | 1 | 1 |  | 1 |

2) 

| AB <br> CD | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| 00 |  |  | 1 | 1 |
| 01 |  |  |  |  |
| 11 | 1 |  |  | 1 |
| 10 | 1 |  | 1 | 1 |

3) 

| CD | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| 00 |  | 1 |  | 1 |
| 01 |  |  |  |  |
| 11 | 1 | 1 |  |  |
| 10 |  |  |  | 1 |

4) 

| AB | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| 00 | 1 | 1 | 1 | 1 |
| 01 | 1 | 1 |  | 1 |
| 11 | 1 | 1 | 1 | 1 |
| 10 | 1 | 1 | 1 | 1 |

5) 

| AB <br> CD | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| 00 | 1 |  | 1 | 1 |
| 01 | 1 |  |  | 1 |
| 11 |  |  |  |  |
| 10 | 1 |  | 1 | 1 |

6) 

| AB | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| CD |  |  |  |  |
| 00 | 1 | 1 | 1 |  |
| 01 | 1 | 1 |  | 1 |
| 11 | 1 | 1 |  | 1 |
| 10 | 1 | 1 | 1 |  |

## Exercise 3:

1- Provide the simplified notation (decimal form) of the following Boolean equations:
$\mathrm{F}_{1}(\mathrm{X}, \mathrm{Y}, \mathrm{Z})=\mathrm{X}+\overline{\mathrm{X}} . \overline{\mathrm{Z}}$
$F_{2}(A, B, C)=A \cdot B+A \cdot \bar{B} \cdot C$
2- Provide the simplified notations (two notations) of $\mathbf{F}$ associated with the following Karnaugh map:

| AB <br> CD | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| 00 |  | 1 |  |  |
| 01 |  |  |  |  |
| 11 | 1 |  |  | 1 |
| 10 | 1 |  | 1 | 1 |

## Exercise 4: (Logic circuit synthesis)

1- Simplify $\mathrm{F}(\mathrm{A}, \mathrm{B}, \mathrm{C}, \mathrm{D})=\sum(1,2,3,5,6,7,8,10,12,13)$
2- Draw the associated circuit.

## Exercise 5: (Logic circuit synthesis)

A hot beverage vending machine offers the following possible drinks to customers:

- Short sweetened coffee
- Short unsweetened coffee
- Long-sweetened coffee
- Long unsweetened coffee
- Long sweetened coffee with milk
- Long unsweetened coffee with milk
- Sweetened milk
- Unsweetened milk

The vending machine orders are:

- short coffee = $\mathbf{a}$
- $\quad$ long coffee $=\mathbf{b}$
- sugar = s
- milk $=\mathbf{m}$

Question: Provide the synthesis of the associated circuit.

## Exercise 6: (Logic circuit synthesis)

Three switches, $\mathbf{S}_{\mathbf{1}}, \mathbf{S}_{\mathbf{2}}$, and $\mathbf{S}_{\mathbf{3}}$, control the startup of a system with two motors, $\mathbf{M}_{\mathbf{1}}$ and $\mathbf{M}_{\mathbf{2}}$.
a- If one or more switches are activated, motor $\mathbf{M}_{1}$ starts.
b- If at least two switches are activated, motor $\mathbf{M}_{2}$ starts.
Question: Provide the synthesis of the associated circuit.

## Exercise 7:

Let $\mathbf{G}$ be a Boolean function such that:
$\mathrm{G}=(\mathrm{x} . \mathrm{y} . \mathrm{z})+(\mathrm{x}+\mathrm{y})$
1- Draw the circuit associated with G.
2- Use NOT, AND, and OR gates to express G, and draw the associated circuit for G.

## Exercise 8: (Analysis of a logic circuit)

Consider the following flowchart:

The analysis of this circuit involves answering these questions:
1- Determine the functions of the circuit ( $\mathrm{S}_{1}$ and $\mathrm{S}_{2}$ ).
2- Simplify the equations $S_{1}$ and $S_{2}$ (using only AND, OR, and NOT).
3- Reuse AND, OR, NOT, XOR, and XNOR gates to obtain the equivalent circuit with fewer logic gates.
4- Draw the obtained circuit.

## Exercise 9:

Provide the logic circuits of a half binary subtractor and a full subtractor.

## Exercise 10:

Find the combinational circuit that converts binary ( 3 bits) to Gray code.
