

Some key words:

Mental representation: Seeing mentally something not in view, distant.

I.e. you are in class. Someone is asking you about your brother and what he is probably wearing.

The image you see in your mind to answer the question is a result of a mental representation “التبصر - Insight” .

The ability to discern the elements involved in an operation before it happens.

I.e. predicting an event before it happens based on fast thinking.

Concrete opposed to abstract.

I.e. a stone is concrete. You can see it and touch it.

“ Density - الكثافة ” it affects the weight of the stone but you cannot see it.

“Over-generalization” : Excess in generalization.

I.e. saying all heavy objects sink “تغرق” in water.

Boats are very heavy but don't sink.
